ABSTRAK

The aim of this research is to know the efficiency of the several economic activity in the non ferrous metal basic industries (I SIC 372). The data used in this research are secondary data of input and output from period 1996-1998. It's collected from Central Bureau of Statistic. Import can be classsified into raw mat, labor or human resources and capital, while output consists of value products, total output and value added of products. The analysis method used is DEA. The result shows that the efficiency in ISIC 3701, ISIC 37202, ISIC 37204 and ISIC 37205 has been reached. While efficiency has not been reached yet by ISIC 37203.

Keywords: *efficiency; DEA*
