Abstract:

Efficiency is an important measurement used to measure a company's performance. In this thesis, we're fully aware of the importance of efficiency towards company's lifecycle, so that we tried to describe it in analytical way, by taking 8 companies in pharmaceutical industry which are listed at Jakarta Stock Exchange, as a research object. The analysis is focused on comparing the companies' efficiency before and after economic crisis hit Indonesia in 1997/1998. The data were taken from Capital Market Directory of 1996 and 2000 to activities which related to operational and production. Using DEA method, the result shows that there are 2 efficient companies both in the year of 1996 and the year of 2000. This research summarized that there are 4 companies which increased their efficiency level, 3 companies which decreased its efficiency level, and one stagnant company.

Key words: efficiency, operational, performance
